	I certify that on the above referenced date I received semen collected from the stud dog named above and inseminated the above named bitch with that semen on the date(s) and at the place referenced above.			
SIGNATURE OF VETERINARIAN WHO INSEMINATED BITCH		DATE	PHONE	

Pertinent Information

Before undertaking either the breeding of a litter or the placing of a dog at stud, each owner should study the Breed Standard, the Code of Ethics, and especially the Stud Service Certificate and Frozen Semen sections of the *Registration Handbook*. This Stud Service Certificate for Frozen Semen must be submitted, together with the Stud Dog Certificate and Litter Application.

Pertinent Information for Licensed Veterinarian

It is vitally important that the licensed veterinarian be familiar with the dogs involved and certain that they are the animals named on the Certificate. Therefore, the CKCSC strongly recommends that the licensed veterinarian, whether collecting, freezing and storing semen from the dog, or using frozen semen to inseminate the bitch, work only on dogs with which he or she has an ongoing professional relationship. The CKCSC Certified Pedigree or AKC Registration Certificate must be presented to the licensed veterinarian, and checked against the Stud Service Certificate for Frozen Semen form for registered name, registration number, color and date of birth. The licensed veterinarian authorized to inseminate the bitch named on the form must sign this Certificate, certifying the date on which the semen from the dog named on the form was received, and the date and location of the insemination of the bitch named on the form.

(Please see back of form for additional pertinent information.)
STUD SERVICE CERTIFICATE FOR FROZEN SEMEN

The Board of Directors may grant exceptions to the rule regarding the age of the sire and the cardiologist clear heart certificate requirement for the use of frozen semen from a stud dog on a case by case basis. In order to request an exception, the owner of the frozen semen must submit the request in writing to the Registration Committee Chair at least six (6) months prior to the anticipated use of the frozen semen. The request should include the reason why an exception should be granted. Upon the receipt of such a request, the Registration Committee may, at their discretion, require additional supporting documentation prior to submitting the request to the Board of Directors for a decision.

The owner of the frozen semen will receive a written decision from the Board of Directors. If an exception has been granted, a copy of this decision must accompany the resulting Application to Register a Litter. Under no circumstances will an exception be granted on a retroactive basis.

After May, 1999, a DNA Certification is required for all stud dogs from which semen is collected for frozen semen use, including foreign stud dogs from which semen is collected for imported semen use in the United States of America. DNA Certification may be provided either by the American Kennel Club DNA Certification program or by an independent laboratory. Frozen semen collected and stored prior to May 1, 1999 is exempt from this DNA requirement, but it is not exempt from the requirement of a heart clearance for the stud dog by a Board Certified Veterinary Cardiologist on or after the age of five (5) years.

Semen for a stud dog residing in the USA and registered with the CKCSC may be frozen and stored using either the stud dog's CKCSC Registration number or the stud dog's American Kennel Club Registration number. If the AKC Registration number is used for storage of the semen, then the owner must provide a copy of the stud dog's AKC Registration Certificate to the owner of the bitch.

The Breeder must have the Stud Service Certificate for Frozen Semen form completed correctly, signed and dated, in order to register a litter along with the Stud Dog's DNA Certification and, for verification, the AKC Registration form if the frozen semen was stored using the stud dog's AKC registration number.

The CKCSC will consider an application to register a litter from artificial insemination of a bitch using frozen semen provided:

- 1) The semen is collected, frozen, and stored by a Licensed Veterinarian authorized to do so.
- 2) The insemination of the bitch is performed by a Licensed Veterinarian
- 3) The litter is eligible for registration in all other aspects.
- 4) An acceptable form of permanent identification for stud dog and bitch is provided.
- 5) All requirements for the use of frozen semen, as set forth above have been met.
- 6) A dog residing in the USA is registered with the CKCSC Health Registry as having a heart clearance after his fifth (5th) birthday.

It is the responsibility of the owner(s) to make sure, prior to breeding, that both the dog and bitch are registered with the CKCSC or are eligible for such registration and that neither animal is restricted from breeding. Otherwise either owner may be in violation of the Code of Ethics, and any resulting puppies will not be registered.

Semen from a **foreign stud dog** may be used provided the stud dog:

- 1) Is registered with a registry officially recognized by the CKCSC (check with the Registration Office prior to arranging a breeding).
- 2) Is over the age of five (5) years at the time of insemination.
- 3) Has a written heart clearance issued by a Veterinary Cardiologist after the stud dog's fifth (5th) birthday accompanies the Application to Register A Litter.
- 4) Has a DNA Certification issued by either the American Kennel Club or an independent testing laboratory.

Frozen semen from a foreign domiciled stud dog collected and stored prior to May 1, 1999 is exempt from requirement (4) above.

The CKCSC will not register any litter resulting from the use of frozen semen that is either sired by or out of a Cavalier owned by any person who has been suspended, expelled, or denied CKCSC privileges where the breeding date is shown to be subsequent to the date of the disciplinary action.

No agreement upon terms of stud service, registration of a litter, restricted transfer or outright transfer, or any other Club procedure shall occur which places any member in violation of the By-Laws, the Code of Ethics, or the Policies of the CKCSC, USA, Inc.
